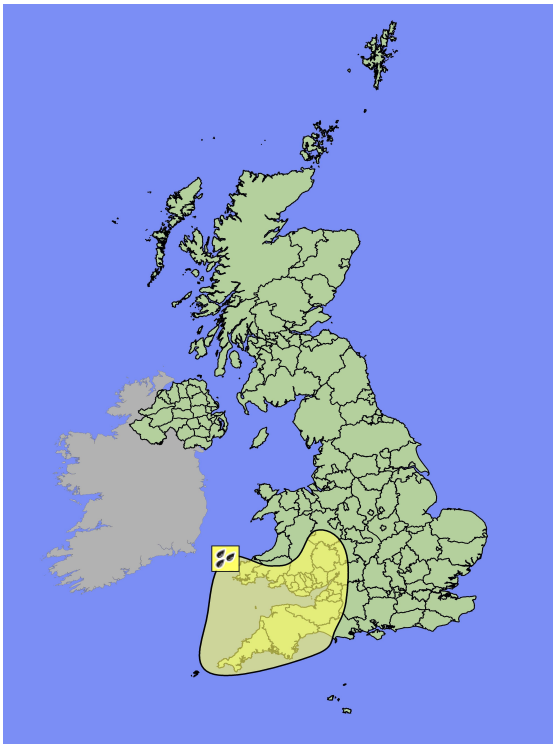
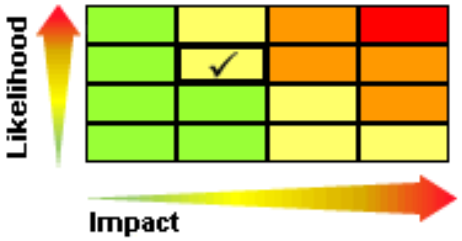
National Severe Weather Warning Service





Chief Forecasters Assessment
A deepening depression to the SW of the country will engage with warm, humid air over N France to bring a spell of heavy, persistent rain from late on Wednesday evening. Due to the saturated nature of the ground, this may well lead to some disruption from localised surface water flooding during Thursday. Totals of 20 to 30mm are likely widely, with up to 40mm possible, especially on high ground. As the low deepens strong winds may increase to gale force, especially near the S Coast.

The Met Office have issued a **Yellow Alert** of **Rain**

Valid from **00:00 on Thu, 10th May 2012** until **23:59 on Thu, 10th May 2012**

Persistent heavy rain will spread across the country during Wednesday evening and the early hours of Thursday. Accompanied by strong to gale force winds, this heavy rain will bring difficult driving conditions with widespread spray on roads.
